

CAT. 4640 Pneumatic Catalog
Tubing, Hose, Fittings, Couplers & Accessories

Since its inception in 1958, Nycoil has recognized the importance of Premier Customer Service, Quality Products, and Quick Delivery.

From the introduction of the original Self-Storing Air Hose over forty years ago, Nycoil has established itself as a leader in the Fluid Power and Industrial markets. We offer tubing, hoses, fittings, quick couplers, and accessories to service your pneumatic needs.

*Kynar® is a registered trademark of Arkema, Inc.

There are three thermoplastic tubing compounds used for the majority of pneumatic lines: Nylon, Polyethylene and Polyurethane. All three offer distinct advantages. Selecting the one that best fits a particular job should be done only after all of the application requirements are carefully considered. For more information on selection, please refer to the Technical Section.

General Tubing Characteristics

	Temperature Range	Working Pressure (at 68°F)	Flexibility	Compatible Fittings
Polyethylene	-100°F to +150°F (-73°C to +66°C)	83 PSI – 200 PSI (5.7 BAR – 13 BAR)	Flexible	Push-To-Connect Compression Hose Barb
Nylon	-40°F to +200°F (-40°C to +93°C)	160 PSI – 500 PSI (11 BAR – 35 BAR)	Least Flexible	Push-To-Connect Compression Hose Barb
Polyurethane	-40°F to +165°F (-40°C to +74°C)	125 PSI – 200 PSI (8.5 BAR – 14 BAR)	Most Flexible	Push-To-Connect Hose Barb

Note: Pressure ratings are also effected by diameter of tubing and wall thickness. Actual performance may vary with different media and working conditions.

Polyethylene Tubing Common Tubing for Common Applications

Polyethylene Applications

- Potable Water Feed/Drains
- Pneumatic or Signal Lines
- Liquid/Air Transfer

Polyethylene is the most commonly used tubing due to its flexibility, wide range of chemical resistance and lower cost.

Polyethylene Property Overview

- Flexible
- Chemically Inert
- UV Resistant (Black tube)
- Temperature Range: -100°F to +150°F (-73°C to +66°C)

Typical Applications

- Low Pressure Pneumatics

LLDPE has a much higher resistance to stress cracking as compared to other Polyethylene compounds. It is also chemically inert, meaning it forms a good barrier against moisture, vapors and gases – minimizing the possibility of leaks or contamination. Where prolonged exposure to sunlight or ultraviolet (UV) light is a concern, black tubing is recommended for extended life.

WARNING

This product can expose you to chemicals including Titanium dioxide, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

Nylon Tubing The Nylon Advantage

Nylon tubing is a popular choice for low pressure pneumatic applications because of its combination of flexibility and toughness. Nycoil uses a heat and light stabilized, very flexible compound that yields a quality tube. Nylon is the most recommended tubing material for all types of pneumatic circuits.

A circuit designer could never get into trouble using Nylon tubing for pneumatic circuits. Due to its physical properties, Nylon is the number one choice for reliable connections with all types of fittings. Nylon retains its performance integrity in elevated temperatures and generally, because of its higher pressure and temperature characteristics, Nylon will have a greater flow passage than composite tubing made from other material with the same outside diameter. These factors should never be overlooked when designing pneumatic circuits.

Nylon Property Overview

- Flexible
- Good Chemical Resistance
- Low Moisture Absorption
- Superior Dimensional Stability
- Temperature Range:
-40°F to +200°F (-40°C to +93°C)

Typical Applications

- Low Pressure Pneumatic
- Pneumatic Circuits
- Injection Lube Systems
- Hydro-Pneumatic Circuit

Nylon Products

- Pneumatic Tubing
- Mini-Coils
- Capillary Tubing

WARNING

This product can expose you to chemicals including Nickel compounds, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

PNEUMATIC TUBING

Nylon Mini-Coils

The tight diameter of our Mini-Coils make them extremely flexible and ideal for use with robotics, instrumentation, small pneumatic tools, control circuits or any other application requiring either constant or intermittent motion. They include a pigtail on each end for easy fitting installation or connection to other devices. A variety of colors are available for coding purposes or to be aesthetically compatible with other equipment. Custom colors, sizes and lengths are available – please consult Customer Service.

Supplied with "pigtails" for connection. All tails are 4" long on both ends.

Adding a Color Code suffix to the part number is required. If no Color code is selected, Natural (0) color will be supplied.

Custom sizes, cut lengths, reel lengths and colors are available upon request. Contact Customer Service.

Recommended working length is 85% of the total length.

Capillary Tubing (Lube Tube)

Capillary Tubing is produced from a specially formulated Nylon resin with a 1/8" outside diameter and a 0.023" wall on 1000 foot reels. The tubing is used for injection lube systems. Tubing is in stock. Contact Customer Service for more information.

Polyurethane Tubing For Extensive Flexing Applications

Polyurethane tubing is usually the best choice for applications requiring extensive flexing, a small bend radius or where kinking can be a problem. Nycoil uses a raw material that will not break down or be affected in any way by moisture. Being a naturally rubbery compound, it requires no plasticizers that can leach out over time. This material also offers superior resistance to grease, oils, fuels and abrasion, making it suitable for a wide variety of applications.

Since Nycoil's Push-To-Connect Fittings have the highest gripping "force" as compared to other brands, it is assured that our tubing will always work with our fittings. However, when using Push-To-Connect Fittings from other manufacturers with any brand of Polyurethane tubing, testing for retention reliability is strongly recommended. Further, we recommend using only Polyurethane tubing made from 95A Durometer hardness compound with Push-To-Connect Fittings. In addition, compression type fittings should never be used with Polyurethane tubing of any hardness.

Polyurethane Products

- Pneumatic Tubing
- EZ Strip™
- Mini-Coils

Polyurethane Property Overview

- Extreme Flexibility
- Reduced Bend Radius
- Moisture Resistant
- Abrasion Resistant
- Temperature Range:
-40°F to +165°F (-40°C to +75°C)

Typical Applications

- Water & Pneumatic Lines
- Spot Welders
- Machines
- Tools
- Pneumatic Plumbing
- Pick & Place Automation

95A Durometer Polyurethane Tubing

Although 95A Durometer is the hardest compound used for Nycoil's Polyurethane tubing, it is still flexible and has a smaller bend radius (without kinking) than most other plastic tubing. Produced from raw materials that resists moisture, fungus, abrasion and a broad range of chemicals making it a popular choice for many applications.

A wide selection of colors makes it adaptable to the functional and aesthetic requirements of most pneumatic circuits and equipment. 95A Durometer Polyurethane Tubing can be used with most brands of Push-To-Connect or Hose Barb Fittings.

WARNING

This product can expose you to chemicals including Nickel compounds, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

"EZ-Strip™" Bonded Polyurethane Tubing, 95A Durometer

Nycoil offers Bonded Tubing in Polyurethane and Nylon. Due to the differences in the properties of these two materials, each is bonded in a different manner. Polyurethane uses our EZ-Strip™ process, which is a continuous bond along the entire length of the tubes. Bonded Polyurethane is easily separated, meaning the tubes can be pulled apart without compromising their dimensional integrity. Maintaining perfect "roundness" is essential for a secure and leak free fitting connection. EZ-Strip™ is also available as Mini Coils.

95A Polyurethane "EZ-Strip™" Tubing

Tube O.D.	Tube I.D.	Part Number	Number of Tubes	Color Code	Length Code
inch	inch			Suffix Key	Suffix Key
1/8	0.062	B322 _	2, 3, 4, 5, 6	2 = Clear & Black	A = 25 ft
5/32	0.093	B325 _	2, 3, 4, 5, 6	3 = Clear, Black & Red	B = 50 ft
3/16	0.107	B333 _	2, 3, 4	4 = Clear, Black, Red & Blue	C = 100 ft
1/4	0.125	B346 _	2, 3, 4, 5, 6	5 = Clear, Black, Red, Blue & Green	
3/8	0.250	B366 _	2, 3, 4, 5, 6	6 = Clear, Black, Red, Blue, Green & Yellow	

To Order:

First add the number of tubes required to the first location to the Part Number. Then add the A, B, or C after the "-" to complete the Part Number and to designate the required continuous length. Longer continuous lengths, more than 6 tubes or custom color sequences available on request.

Example: B3224-B = 4 tubes at 50 feet.

"EZ Strip™" Features

- **Saves Time & Money**
Quick Installation: Running a single strip of bonded tubing is much faster than running multiple tubes individually
- **Allows Compact Circuit**
Space Economy: Bonded tubes provide a more precise and consistent dimension than bundles, wraps or channels
- **Reduces Errors**
Visible Traceability: Color-coded bonded tubes make routing a circuit less complicated and easier to follow
- **Enhances Appearance of the Circuit & Equipment**
Eliminates Clutter: Bonded tubing will eliminate tangled and sloppy tubing runs

Mini-Coils are fabricated with precision tubing that can be used with Push-to-Connect fittings and intended for applications where motion and fatigue for non flexible connection is a concern. Supplied with "pigtails" for connection. All "tails" are 6" long on both ends. 5/32" units of lengths longer than 60" are manufactured with 1-1/8" Coil O.D. for shorter compacted length. Adding a Color Code Suffix to the part number is required. If no color is selected, Clear (0) Color will be supplied. Custom sizes, lengths and colors are available. Please consult the factory with your specifications.

Recommended working length is 85% of the total length.

**WARNING**

This product can expose you to chemicals including Nickel compounds, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

Ny-Chem™ Kynar®* (PVDF) Purity and Chemical Resistance

Ny-Chem™ is a flexible, high grade Kynar® PVDF (Polyvinylidene Fluoride) tubing that is one of the purist of all commercial resins. Ideal for applications where compliance to most agency regulations such as FDA, USDA, USP and NSF are required. Ny-Chem™ is also one of the toughest tubing materials and offers extremely good chemical resistance. As long as high heat is not a consideration, Ny-Chem™ can be used in applications where PTFE was once considered the only option, significantly reducing costs. Ny-Chem™ can also be coiled into a self-storing air hose.

Kynar® Property Overview

- Tasteless and Odorless
- Good Chemical Resistance
- Complies with USDA, FDA and Sanitary Standards for PVDF
- Low Permeability
- Low Outgassing
- Meets NSF Standard 61
- Meets UL 94 V-0 Flame Retardant Requirements
- Temperature Range: -40°F to +250°F (-40°C to +121°C)

Typical Applications

- Food & Beverage
- Medical
- Pharmaceutical
- Semiconductor (High Purity Process Applications)

WARNING

This product can expose you to chemicals including Tetrafluoroethylene, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

Tubing Accessories

Tube Cutters

Description	Part Number
Tube Cutter	60001
Release Tool	60002
Replacement Blades, 10 pack	60004

- Exclusive “positive stop” handle makes it easy to hold the cutter in the open position
- Specially angled handle (not just enlarged ends) allow a firm grip, minimizing the possibility of it accidentally “flying” out of the user’s hand
- Large, ribbed handle further adds to the secure, yet comfortable, grip
- Rugged construction and ergonomic design combine to permit cutting up to 3/4" tubing or hose with minimum effort
- Corrosion resistant hardened steel blade assures straight, crisp cuts for optimum fitting connection
- Replacement blades can be installed in seconds using only a screwdriver
- Provision for leash attachment conveniently located on both sides of the handle – will not interfere with cutter operation

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Specialty Engineered Products

To meet your unique applications, Nycoil offers value added custom made products. Contact Customer Service for details.

CAPILLARY TUBING

Application:
Injection Lube Systems

CREEL TUBING

Application:
Textiles & Carpet

CUSTOM COILS

Tube Fittings

A. Push-To-Connect

Push-to-Connect Fitting - Nickel Plated Brass
Standard & Metric

Composite Push-to-Connect Fittings
Standard & Metric
Flow Controls

B. Pipe Fittings

Tube Fittings

Nycoil offers a large selection of tube fittings in standard and metric sizes. Ready to use, compact, one-piece fittings for use with most thermoplastic tubing. Designed to be used with no additional tube support.

Installation is easy – no tools are required.

To connect, simply push the tubing into the fitting until it bottoms. Unlike many other Push-To-Connect Fittings, you won't have to struggle to release the tubing. To disconnect, all you have to do is push the collar down and pull the tubing out.

Nickel Plated Push-to-Connect Tube Fittings

Push-to-Connect - It's the Grip that Won't Quit....Until You Want It To!

Push-to-Connect fittings have nickel plated brass bodies, a stainless steel grab ring, and a high impact release collar to provide long life assurance as well as an attractive appearance.

COMPONENT	MATERIAL
Body	Nickel Plated
O-Ring	Nitrile
Release Button	Polyacetal
Grab Ring	Stainless Steel Ring

Push-to-Connect Advantages

Ready-to-use compact one-piece fitting for use with most thermoplastic tubing. This fitting is specially designed for low pressure circuits where fast assembly, disassembly and reassembly is important. No special tools are needed for assembly; just insert the tubing until it bottoms.

Push-to-Connect is designed to be used with no tube support. Radial claws on the stainless steel grab ring grip the tubing securely to provide retention.

The outside diameter of the tubing to be used with the fitting is marked on the release button.

Working Pressure

0 to 200°F at up to 280 PSI depending on tubing being used.

Composite Push-to-Connect Tube Fittings

Quick and Easy...Full Flow

Composite Push-to-Connect fittings were designed as an economical alternative for pneumatic applications. Ready to use, compact, one-piece fitting for use with most thermoplastic tubing.

Composite Push-to-Connect straight fittings have a nickel plated brass body and shaped fittings have a composite body with nickel plated brass componentry.

Composite Push-to-Connect Advantages

This fitting was designed to meet the needs of the motion control industry where fast assembly, dis-assembly and re-assembly is important. No special tools needed for tube assembly, just insert the tubing until it bottoms.

Composite Push-to-Connect is designed to be used without a tube support, providing full flow through the tubing. The grab ring design grips the tubing securely to provide retention.

Composite Push-to-Connect external pipe threads come with a preapplied white PCTFE sealant. Positional external pipe threaded ends are featured on shapes for installation in compact areas and for precise positioning.

Working Pressure

-4°F to +175°F at up to 290 PSI depending on tubing being used.

Note

Vacuum applications are dependent upon temperature and type of tubing being used.

Tube sizes are determined by the number of sixteenths of an inch in the tube O.D.

WARNING

These products can expose you to chemicals including Nickel, which is known to the state of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

Push-to-Connect Flow Controls

Composite - Flow Control Regulators

COMPONENT	MATERIAL
Body	Glass Reinforced Nylon 6.6
Gripping ring	Stainless Steel
Adjustment Screws	Nickel-Plated Brass
Locking Nut	Nickel-Plated Brass
Base	Nickel-Plated Brass

Push-to-Connect Flow Control Advantages

The compact body size of our flow control valves make them ideal for small circuits where space is limited. Our highly sensitive adjusting screws allows fine settings to meet the precise demands of any application. The locking nut will accurately hold the required setting even under high vibration conditions. "Push-In" connections allow easy and quick connections to or disconnections from nylon, polyethylene and 95A durometer polyurethane tubing.

Pressure Range: 15 to 145 psi

Temperature Range: 30°F to +160°F

Working Fluid: Compressed Air

Brass Pipe Fittings

Brass pipe fittings meet SAE J530 and SAE J531 specifications.

Pipe Fitting Advantages

All pipe fittings threads are made to Dryseal standards.

Working Pressure

From -65°F to +250°F at 1000 PSI

Note

Special fitting configurations and/or sizes available.

Tube sizes are determined by the number of sixteenths of an inch in the tube O.D

COMPONENT	STANDARD

Mufflers & Filters

Silencer Mufflers (Aluminium Body)

Unique design provides a superior noise reduction to O.S.H.A. standard with minimum effect on air efficiency. Aluminium body and screen element resists rust, corrosion and melting.

Specifications

- Pressure Rating - 300 PSI maximum
- Temperature Range - +40°F up to +160°F
- Meets O.S.H.A. Standards

Silencer Muffler

Pipe Size	Overall Length	Diameter	Appx. Weight	Part Number

3/4	4-11/16	1-1/2	.29	80560

Sintered Bronze Muffler-Filter

Compact design effectively diffuses air and muffles noise from valve exhaust ports. Noise reduction meets O.S.H.A. standards. Muffler filters also protect valves, airtools and air components from dirt and other foreign matter. Standard 40 micron element.

Specifications

- Pressure Rating - 300 PSI maximum
- Temperature Range - +40°F up to +300°F
- Meets O.S.H.A. Standards

Muffler Speed Controls

Provides dual job of metering exhaust air to control cylinder or tool speed and muffles noise to meet O.S.H.A. standards. These filters are capable of a wide range of flow settings and are equipped with lock nuts to maintain setting. Standard 40 micron element.

Muffler Speed Controls

Pipe Size	Overall Length	Diameter	Appx. Weight	Part Number
inch	inch	inch	lbs.	
1/8	29/32	1-5/16	.07	80210

3/4	1-3/4	2-3/8	.42	80260

Specifications

- Pressure Rating - 300 PSI maximum
- Temperature Range - +40°F up to +300°F
- Meets O.S.H.A. Standards

Breather Vents - Low Profile

Low profile vents have many applications for vacuum relief or pressure equalization on gear boxes, oil tanks or reservoirs. Also for single acting cylinder ports. 40 micron standard element.

Breather Vents - Low Profile

Pipe Size	Overall Length	Hex	Appx. Weight	Part Number
inch	inch	inch	lbs.

1/2	7/8	7/8	.06	80340

Specifications

- Pressure Rating - 150 PSI maximum
- Temperature Range - +40°F up to +300°F

Air Filter

Designed for the protection of small air tools such as impact wrenches, nut runners and screw drivers. Will effectively reduce downtime and prevent costly repairs in addition to extending their life. May be used for fluids such as oil or gasoline. 40 micron standard element for minimum back pressure.

Polyurethane Self-Storing Air Hose

Supercoil® & >>SUPERBRAID<<® Self-Storing Air Hoses are ideal for applications where kink and abrasion resistance are important considerations. Polyurethane's extreme flexibility and light weight combine to minimize user fatigue while its toughness and long lasting durability allow it to withstand rough handling.

These extremely flexible hoses are perfect for applications where kink and abrasion resistance are important considerations.

Nycoil Polyurethane Self-Storing Air Hoses are available in Supercoil and >>Superbraid<<. The >>Superbraid<< hoses have an additional layer of Polyester Braiding for additional reinforcement, providing the end user with a higher working pressure product.

Supercoil® - 95A Durometer Polyurethane

>>SuperBraid<<® - 85A Durometer Reinforced Polyurethane

Product Features

- SUPER flexible – 100% kink proof
- Rugged brass swivel fittings provide long life & minimal flow restrictions
- State-of-the-art strain relief system protects the hose & increases its maneuverability
- Low tension retractability – minimizes user fatigue
- Abrasion resistant
- Soft Polyurethane material will not mar finishes
- Strong enough to repel most oils and chemicals
- 16" tail on the working (tool) end eliminates tangling of the tool with the coils
- 8" tail on the supply end makes the connection to the air source easy
- Temperature Range: -40°F to +165°F (-40°C to +74°C)

What sets us apart from the competition?

The state-of-the-art strain relief system.

Nycoil's state-of-the-art strain relief system protects the hose & increases its maneuverability. Nycoil hose is uniquely designed to maximize hose flexibility and protect the hose at its weakest point, the barb.

Rugged brass swivel fittings provide long life & minimal flow restrictions.

Wide selection of sizes, lengths & colors. Tight bend radius minimizes space requirements.

All Swivel Fittings include Thread Sealant pre-applied at the factory!

Field attachable compression fittings are available for quick and easy installation without the need of any special tools. Supercoil Hose Assemblies can be ordered with these field attachable compression fittings already installed for rough environments that may require more frequent repairs. We also offer rigid fittings for additional durability on high impact or severe vibration applications.

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

>>SuperBraid<<® PU Self-Storing Air Hose

Product Features

- Super flexible - 100% kink proof
- Easy to handle - 29% lighter weight than equivalent thermoplastic products and 63% less than equivalent rubber air hoses
- Tight bend radius minimizes space requirements
- Inner tube, braiding & outer cover will not separate
- Quick in-the-field repairs can be made with commercially available hose barbs and clamps – no special kits are needed
- Extremely tough and abrasion resistant
- Rugged brass swivel fittings provide long life & minimal flow restrictions
- State-of-the-art strain relief system protects the hose and increases its maneuverability
- Low tension retractability - minimizes user fatigue
- Abrasion resistant
- Soft Polyurethane material will not mar finishes
- Strong enough to repel most oils and chemicals
- 16" tail on the working (tool) end eliminates tangling of the tool with the coils
- 8" tail on the supply end makes the connection to the air source easy

>>Superbraid<<® is manufactured in a way that the inner tube, braiding and outer cover cannot come apart. This means that >>Superbraid<< will not break down and its integrity is not compromised over time, assuring a long life of trouble free use.

The >>SUPERBRAID<<® Self-Storing Air Hose is made from tough Polyurethane with Polyester Braiding for additional reinforcement. Most other hoses consist of an inner tube, braiding and an outer cover that eventually loses adhesion due to the bending, flexing, expansion and contraction occurring during normal use. This separation of the layers is the most common cause for hose failure. Unlike these other hoses, we manufacture >>SUPERBRAID<< in a way that the inner tube, braiding and outer cover cannot separate. This means that >>SUPERBRAID<< will not break down and its integrity is not compromised over time, assuring a long life of trouble free use!

The >>Superbraid<< Hose is very lightweight. Our 3/8" x 50' hose assembly (the most popular size) is more than 20% lighter than similar hose assemblies from other manufacturers so it's easy to carry around, yet tough enough to resist the abuse of severe applications.

>>SUPERBRAID<< features rugged fittings made from corrosion resistant brass that will withstand the roughest treatment. Our contemporary looking, state-of-the-art strain relief sleeve protects the hose at its weakest point (at the barb) and also enhances the appearance of the entire assembly. While other manufacturers use a strain relief that limits the ability of the hose to bend, ours was uniquely designed to take advantage of Polyurethane's flexibility, giving the user a much wider range of motion without the possibility of kinking.

Field attachable compression fittings are available for quick and easy installation without the need of any special tools. For rough applications that may require more frequent repairs, >>SUPERBRAID<< Hose Assemblies can be ordered with reusable compression fittings already installed. We also offer rigid fittings for additional durability on high impact or severe vibration applications.

Product Specifications

- Temperature Range: -40°F to +165°F (-40°C to +74°C)
- Outer Cover: 85 Durometer Polyurethane
- Inner Braiding: Polyester
- Strain Relief Sleeves: Engineered Thermoplastic
- Standard Colors: Yellow or Transparent Blue

Ultra-Lite>>SuperBraid<<® PU Air Hose

Ultra-Lite >>Superbraid<<® Hose is very lightweight. Our 3/8" x 50' hose assembly (the most popular size) is more than 20% lighter than similar hose assemblies from other manufacturers so it's easy to carry around, yet tough enough to resist the abuse of severe applications.

Ultra-Lite >>Superbraid<<'s extreme flexibility and ability to lay out flat without kinking or looping make it the most user-friendly hose available. It retains these characteristics even in cold environments (down to -40° F).

Ultra-Lite >>Superbraid<< features rugged fittings made from corrosion resistant brass that will withstand the roughest treatment. Our state-of-the-art strain relief protects the hose at its weakest point (at the barb) while enhancing the appearance of the entire assembly.

Product Specifications

- Temperature Range:
-40°F to +165°F (-40°C to +74°C)
- Outer Cover: 85 Durometer
Polyurethane
- Inner Braiding: Polyester
- Strain Relief Sleeves:
Engineered Thermoplastic
- Standard Colors:
Yellow or Transparent Blue

Product Features

- 29% lighter weight than equivalent thermoplastic products and 63% less than equivalent rubber air hoses
- State-of-the-art strain relief system allows the hose to bend freely without kinking at the fitting
- Quick in-the-field repairs can be made with commercially available hose barbs and clamps – no special kits are needed
- Effortlessly lays out flat and coils into a loop, even in sub-zero temperatures
- Extremely tough and abrasion resistant

3/8"	-	Hose Splicer	06244HSU	-

* Includes Fitting & Nut (no spring guard)
**Includes Fitting & Nut with permanently attached spring guard.

NOTE: Nycoil Field Attachable Fittings do not require inserts or ferrules that become deformed during installation, so the fittings can be used over again without replacing any components. In addition, only two wrenches are needed to complete a safe and secure connection, making fitting replacement quick and easy!

WARNING
This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Nylon Self-Storing Air Hose

Nycoil was the inventor of the Nylon Self-Storing Air Hose in 1958. It was developed as a means to transport air from overhead piping to pneumatic tools at assembly stations while keeping the work area neat and safe. Unlike straight hose that lays on the floor or workbench and can easily become tangled, Self-Storing Hose retracts to keep the area clutter free. The user can also be more productive because the hose retracts away from the work area, giving the user more clear space and freedom of movement.

Nylon is resistant to a wide variety of chemicals making it a good choice for most industrial environments. For more information on the properties of Nylon, please view the Technical Section.

Black hose is especially good for prolonged exposure to ultraviolet (UV) light

Nylon Self-Storing Air Hose Part Numbering Structure

Hose Type
N = Nylon Self-Storing Air Hose
T = Tightly Wound Nylon Self-Storing Air Hose
H = Heavy Duty Nylon Self-Storing Air Hose
2N = Dual Bonded Nylon Self-Storing Air Hose

Hose Size
2 = 1/8"
3 = 3/16"
4 = 1/4"
5 = 5/16"
6 = 3/8"
8 = 1/2"
9 = 3/4"
1 = 1"
7 = 1-1/4"

Fitting Size & Thread Type
G = 1/8" NPT Male
A = 1/4" NPT Male
B = 3/8" NPT Male
C = 1/2" NPT Male
D = 3/4" NPT Male
E = 1" NPT Male
L = 1/8" BSPT Male
M = 1/4" BSPT Male
N = 3/8" BSPT Male
Q = 1/8" BSPP Male
R = 1/4" BSPP Male
S = 3/8" BSPP Male
X = No Fittings (Bulk Hose)

Fitting Type
R = Rigid
S = Swivel
T = Rigid & Swivel
X = No Fittings (Bulk Hose)

Hose Color
1 = Black
2 = Red
3 = Blue
5 = Yellow

Hose Length
12 = 12'
25 = 25'
50 = 50'
80 = 80'
100 = 100'

NOTE: Heavy Duty Nylon assemblies have reusable fittings with no spring guard.

State-of-the-art lever operated Vari-Flo Blow Guns & the Original Nycoil® Self-Storing Air Hose packaged together as a high quality yet economical combination.

Nylon Self-Storing Air Hose & Blow Gun

Item Description	Part Number
1/4" x 12' Red Nylon Hose & Vari-Flo Safety Tip Blow Gun (Chrome Plated)	GCS-2-12
1/4" x 12' Yellow Nylon Hose & Vari-Flo Safety Tip Blow Gun (Chrome Plated)	GCS-5-12
1/4" x 25' Red Nylon Hose & Vari-Flo Safety Tip Blow Gun (Chrome Plated)	GCS-2-25
1/4" x 25' Yellow Nylon Hose & Vari-Flo Safety Tip Blow Gun (Chrome Plated)	GCS-5-25
1/4" x 12' Red Nylon Hose & Vari-Flo Safety Tip Blow Gun (Black Powder Coat)	GBS-2-12
1/4" x 12' Yellow Nylon Hose & Vari-Flo Safety Tip Blow Gun (Black Powder Coat)	GBS-5-12
1/4" x 25' Red Nylon Hose & Vari-Flo Safety Tip Blow Gun (Black Powder Coat)	GBS-2-25
1/4" x 25' Yellow Nylon Hose & Vari-Flo Safety Tip Blow Gun (Black Powder Coat)	GBS-5-25
1/4" x 12' Red Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Chrome Plated)	GCR-2-12
1/4" x 12' Yellow Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Chrome Plated)	GCR-5-12
1/4" x 25' Red Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Chrome Plated)	GCR-2-25
1/4" x 25' Yellow Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Chrome Plated)	GCR-2-25
1/4" x 12' Red Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Black Powder Coat)	GBR-2-12
1/4" x 12' Yellow Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Black Powder Coat)	GBR-5-12
1/4" x 25' Red Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Black Powder Coat)	GBR-2-25
1/4" x 25' Yellow Nylon Hose & Vari-Flo Rubber Tip Blow Gun (Black Powder Coat)	GBR-5-25

Other color/length combinations available. Contact the factory for requirements not listed.

NOTE: Rubber Tip Blow Gun must be used on a pressure regulated air line.

Lead-In Hose (Pigtail or Whip Hose)

Lead-In Hoses, also called Pigtails, Whip Ends or Whip Hoses, are used on the working end of self-storing air hose, as well as straight hoses, as a means of minimizing costs by:

- Extending the life of the hose - Most hose wear and failure occurs near the point of use, where all of the bending and flexing occurs. A Lead-In Hose will take the brunt of the abuse, giving the hose a much longer service life.
- Protecting the coupler - High vibration and impact tools will damage the valve of a coupler, causing premature failure. A short Lead-In Hose ("snubber") between the coupler and air tool will absorb the shock and vibration, protecting the coupler from these damaging effects.
- Making the worker more productive - Most air supply hoses are heavy or bulky and difficult to work with. A lightweight, flexible Lead-In Hose makes it easier for the worker to manipulate the air tool, reducing fatigue while increasing productivity.

Nycoil Lead-In Hoses are made exclusively from 3/8" Ultra-Lite >>SUPERBRAID<<®, combining lightweight, flexibility, durability and a working pressure (200 psi) that meets the requirements of almost every application. The contemporary looking state-of-the-art strain relief sleeve on the tool end protects the hose at its weakest point (at the barb) while enhancing the appearance of the entire assembly. Other manufacturers use a strain relief that limits the ability of the hose to bend, but ours was uniquely designed to take advantage of Polyurethane's flexibility, giving the user a much wider range of motion without the possibility of kinking . . . making it ideal for a Lead-In Hose! Available in a variety of hose lengths in four (4) configurations:

- 1/4" Male NPT x 1/4" Rigid Female NPT
- 3/8" Male NPT x 3/8" Rigid Female NPT
- 1/4" Male NPT x 1/4" Rigid Male NPT
- 1/4" Male NPT x 1/4" Body Size Industrial Interchange Plug

Ball Valves

A. Safety Exhaust

B. Standard Valve

Ball Valves

Nycoil's forged body ball valve provides extended service life and resists failure caused by severe temperature applications. Optimum flow design assures maximum system efficiency. Highly inert PTFE seats and seals provide resistance to chemical corrosion. Nycoil also provides a blow-out proof stem, chrome plated brass ball and a specially designed handle enabling increased turning leverage for ease of opening and closing. Nycoil's ball valve can be readily identified assuring high quality engineering and reliability. This economical ball valve is available in female pipe sizes. Nycoil's ball valve bodies are machined from high quality CA 377 forgings.

Nycoil's industrial ball valve product line is intended for general purpose use. Please be aware that ball valves are intended for use in the fully open or closed positions. Depending on application conditions, throttling of the valve may result in premature seal failure and/or inability to turn the valve handle.

For use as fuel line shutoffs for gasoline and diesel powered over the highway, off highway, and construction equipment vehicles. Water and air service lines on capital equipment and plant design plumbing that require total shutoff capability.

Safety Exhaust with Lockout Handles

O.S.H.A. APPROVED

Specifications

- Pressure Rating - 250 PSI air
- Temperature Range - 0°F up to +350°F
- All valves are two piece. Options are full port valve with threaded ends and standard port; 3/4" and 1" are standard port.
- Handle: Tamper proof lockout feature locks in open or closed position.
- Exhaust port is tapped 10-32 UNF thread for mounting mufflers or to direct air.
- Complies with O.S.H.A. Standard 1910.147

How It Works

When the handle is in the off position, the exhaust vents residual air on the downstream side of the valve. This ensures that air powered equipment is safe to service.

WARNING

These products can expose you to chemicals including Nickel or Lead, which are known to the state of California to cause cancer, and Lead which is known to cause birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Pneumatic Couplers

Nycoil uses a descriptive part numbering system for Pneumatic Couplers that takes the confusion out of matching couplers and plugs. Couplers and plugs have the same first three characters in their part numbers and are the same Interchange and body size, so they are compatible and can be connected. In addition, each character has a specific meaning that describes the particular coupler or plug.

Pneumatic Coupler Part Numbering Structure

SERIES 24 KM - 1/4" Body - Manual Single Shut-Off - NOMINAL PLUG BORE .22"

Integral sleeve guard prevents accidental disconnecting of the coupler if it is snagged on an obstruction as it is dragged along the ground. Deep knurls and grooves on the sleeves assure a secure gripping surface for easy operation.

**WARNING**

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

**SERIES 23 KA & 23 KF - 1/4" Body - Automatic Single Shut-Off & Straight-Thru - NOMINAL PLUG BORE .22"**

The 23 Series is the optimum flow alternative to the 24 Series. It is fitted with the ULTRA-FLO valve and can be used with large compressed air tools.

**INTERCHANGE**

RECTUS 24KM	PARKER 20 & HF
ISO 6150 B	US-MIL-SPEC-C-4109
GROMELLE 600	Ind. Interchange 1/4"
CEJN	HANSEN 3000
FOSTER	

Working Temperature depending on medium

- 4°F up to +210°F (NBR)
- 40°F up to +250/300°F (EPDM)
- +5°F up to +400°F (FKM)

At a temperature below -40°F and above +250°F special seals are available.

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

BSP female and BSPT (DIN2999) threads are available upon request.

MATERIAL	
COUPLER	STANDARD
Back Body	Brass, Nickel Plated
Valve Body	Brass, Nickel Plated
Sleeve	Steel Hardened, Nickel Plated
Valve	Zinc Die-Casting, Nickel Plated
Inner Sleeve	Brass
Spring Plate	Brass
Spring & Locking Ring	AISI 301
Locking Balls	AISI 420
Seals	NBR
Nipples	
Threaded	Steel Hardened, Nickel or Zinc Plated
Barbed	Steel Hardened, Nickel Plated

This series is also available without a valve in a Straight-Thru design.

For Straight-Thru Couplers, please change the part number from 23KA to 23KF when ordering.

**WARNING**

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Universal Coupler

SERIES 12 UN - 1/4" Body - Automatic Push To Connect - Single Shut-Off

The 1/4" UN Series Coupler will accept the industrial interchange, [(MIL-C-4109F) and (ANSI/NFPA) T3.20.14- 1990], 10 Series (Tru-Flate) and the 50 Series (ARO 210) style nipples. The coupler features automatic push-to-connect operation, high flow machined "window valve," corrosion resistant solid brass construction and a sleeve guard which helps prevent accidental disconnects and protects the sleeve from damage.

While the best quick coupling performance is obtained by matching like series couplers and nipples, the universal coupler permits multiple series nipples to mate with one coupler.

Working Temperature depending on medium
-4°F up to +210°F (NBR)

At a temperature below -4°F and above +210°F special seals are available.

Working Pressure

150 psi, maximum static working pressure with 4:1 design factor.

Locking Device

4 balls

SERIES 91 KA - Automatic Single Shut-Off - NOMINAL PLUG BORE .10"

The 91 Series is a variation of the 20 Series Couplers. The valve has been shortened in respect that the plug seals before the Coupler valve opens. In spite of the short valve, the well-proven, single hand operation is retained as the ball-lock is replaced by a pin-lock. This extends the external diameter of the sleeve from 10 to 13 mm.

INTERCHANGE

Plastic Hose Connect. with Spring Guard Plug

Male Thread Plug

Female Thread Plug

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

SERIES 21 KB - Automatic Double Shut-Off - NOMINAL PLUG BORE .20"

Both the couplings and plugs are fitted with a valve. While both valves are opened, full flow is guaranteed as soon as the two are connected. The valves close when disconnected.

INTERCHANGE

CAMOZZI KANI
EWO

**Working Temperature** depending on medium

-4°F up to +210°F (NBR)
 -40°F up to +250/300°F (EPDM)
 +5°F up to +400°F (FKM)
 +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

500 psi maximum static working pressure with 4:1 design factor.

Note

Metric male (DIN 2353) & female threads and BSP male & female threads are available upon request.

SERIES 90 KA - Automatic Single Shut-Off - NOMINAL PLUG BORE .20"

The 90 Series is a variation of the 20 Series. The valve has been shortened so that the plug seals prior to opening the coupler's valve. In spite of the short valve, the well-proven, single hand operation is retained, as the ball-lock is replaced by a pin-lock. This extends the external diameter of the sleeve from 16mm to 20mm.

INTERCHANGE

RECTUS 21 KANI
EWO

Working Temperature depending on medium

- 4°F up to +210°F (NBR)
- 40°F up to +250/300°F (EPDM)
- +5°F up to +400°F (FKM)
- +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

BSP male & female threads are available upon request.

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

SERIES 86, 87 & 88 - Manual Moldtite

The 86, 87 & 88 Series couplers were especially developed for connecting coolant lines and injection molds. Countersunk plugs are easily connected and disconnected because of the extended sleeve. The angular connections prevent kinks from forming in the hose.

SERIES 21 KL - Automatic Double Shut-Off - NOMINAL PLUG BORE .20"

Both the coupling and plug are fitted with a valve. During the connection process, the plug and the coupling seal prior to opening both valves. Both valves close simultaneously when disconnected, allowing the coupling and plug to be separated afterward.

AIR

WATER

Working Temperature depending on medium

- 4°F up to +210°F (NBR)
- 40°F up to +250/300°F (EPDM)
- +5°F up to +400°F (FKM)
- +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

120 psi, maximum static working pressure with 4:1 design factor.

Note

Metric male (DIN 2353) & female threads and BSP male & female threads are available upon request.

SERIES 25 KL - 1/4" Body - Automatic Double Shut-Off - NOMINAL PLUG BORE .29"

Designed specifically for liquid mediums, 25KL is a double shut-off version of the 25KA compressed air model. The valves in both the coupling and plug are opened when connected. Both valves close simultaneously when disconnected, ensuring minimum leakage loss.

MATERIAL

Seal	NBR	NBR	FKM	FKM

Working Temperature depending on medium

-4°F up to +210°F (NBR)
 -40°F up to +250/300°F (EPDM)
 +5°F up to +400°F (FKM)
 +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

120 psi, maximum static working pressure with 4:1 design factor.

Note

Metric male & female threads, BSP male & female threads and BSPT (DIN 2999) threads are available upon request.

**WARNING**

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Industrial Interchange

SERIES 23 KE - 1/4" Body - Automatic Single Shut-Off - NOMINAL PLUG BORE .22"

INDUSTRIAL INTERCHANGE

Designed for bleeding off trapped air. Not suitable for direct connection to compressed air tools.

INTERCHANGE

RECTUS 24	Ind. Interchange 1/4"
FOSTER	US-MIL-SPEC-C-4109
CEJN	HANSEN 3000
ISO 6150B	GROMELLE 600
PARKER 30	

Working Temperature depending on medium

-4°F up to +140°F (NBR)

Working Pressure

120 psi, maximum static working pressure with 4:1 design factor.

Note

BSP female threads and BSPT (DIN 2999) threads are available upon request.

CAUTION

Not recommended for direct connection to compressed air tools. Reliable functioning is only guaranteed in conjunction with original RECTUS plugs made of steel.

SERIES 21 KS & 21 KR - Automatic Single Shut-Off & Automatic Straight-Thru - NOMINAL PLUG BORE .20"

Similar to the 21KA Series except with an additional safety locking system. When being disconnected, the plug must first be pushed further into the coupler before it can be disconnected. This prevents unintentional disconnection.

Working Temperature depending on medium

- 4°F up to +210°F (NBR)
- 40°F up to +250/300°F (EPDM)
- +5°F up to +400°F (FKM)
- +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

Metric male (DIN 2353) & female threads and BSP male & female threads are available upon request.

SERIES 21 KD - Miniature - Automatic Double Shut-Off - NOMINAL PLUG BORE .20"

The coupler and the plug are both fitted with a valve. Both valves are open when the connection is made which guarantees immediate flow. To prevent leaking, the valves close when the coupler is disconnected. The special locking system, based on 21KS, prevents an unintentional disconnection.

Working Temperature depending on medium

- 4°F up to +210°F (NBR)
- 40°F up to +250/300°F (EPDM)
- +5°F up to +400°F (FKM)
- +32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

Metric male (DIN 2353) & female threads and BSP male & female threads are available upon request.

Hose Barb Plug

SERIES 25 KS - 1/4" Body - Automatic Single Shut-Off - NOMINAL PLUG BORE .20"

Similar to the 25KA Series except with an additional safety locking system. When being disconnected, the plug must first be pushed further into the coupler before it can be disconnected. This prevents unintentional disconnection.

SERIES 25 KD - 1/4" Body - Automatic Double Shut-Off - NOMINAL PLUG BORE .20"

The coupler and the plug are both fitted with a valve. Both valves are open when the connection is made which guarantees immediate flow. To prevent leaking, the valves close when the coupler is disconnected. The special locking system, based on 25KS, prevents an unintentional disconnection.

MATERIAL	
COUPLER	STANDARD
Back Body	Brass, Nickel Plated
Valve Body	Brass, Nickel Plated
Sleeve	Brass, Nickel Plated
Valve	Brass
Spring & Locking Ring	AISI 301
Locking Balls	AISI 420
Seals	NBR
PLUG	
Plug Profile	Brass, Nickel Plated
Back Body	Brass, Nickel Plated
Valve	Brass
Spring	AISI 420
Seal	NBR

Working Temperature depending on medium

-4°F up to +210°F (NBR)
 -40°F up to +250/300°F (EPDM)
 +5°F up to +400°F (FKM)
 32°F up to +600°F (FFKM)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

500 maximum static working pressure with 4:1 design factor.

Note

BSP male and female & BSPT (DIN 2999) threads are available upon request.

RECTUKEY (Keyed Couplers)

RECTUKEY

Series 21 KA, KB & KF
E-101

Series 25 KA, KB & KF
E-104

SERIES 21 KA & 21 KF RectuKey - 1/4" Body - Automatic Single Shut-Off & Automatic Straight -Thru - NOMINAL PLUG BORE .20"

SERIES 21 KB - Double Shut-Off

The 21 RectuKey Series provides an excellent solution for the connecting of different media without the inherent danger of making the wrong connection. Four standard codes with matching colors for the coupling and the respective plugs make sure there is no mix-up of the media when connecting.

AIR

WATER

Working Temperature depending on medium

+25°F up to +572°F (NBR)

-4°C up to +300°C

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

Metric male (DIN 2353) & female threads and BSP male & female threads are available upon request.

CAUTION

Cannot be interconnected with the standard 21 Series.

SERIES 25 KA & KF RectuKey - 1/4" Body - Automatic Single Shut-Off & Straight -Thru - NOMINAL PLUG BORE .31"

SERIES 25 KB - Double Shut-Off

Working Temperature depending on medium

-4°F up to +300°F (NBR)

Working Pressure

500 psi, maximum static working pressure with 4:1 design factor.

Note

BSP male & female threads are available upon request.

CAUTION

Cannot be interconnected with the standard 25 Series.

MATERIAL		
COUPLER	STANDARD	NICKEL PLATED
Back Body	Brass	Brass, Nickel Plated
Valve Body	Brass	Brass, Nickel Plated
Sleeve	Aluminium, anodized	Aluminium, anodized
Valve	Zinc Die-Casting, Nickel Plated	Zinc Die-Casting, Nickel Plated
Spring & Locking Ring	AISI 301	AISI 301
Locking Balls	AISI 420	AISI 420
Seals	NBR	NBR
PLUG	Brass w/anodized aluminium designation	Brass, Nickel plated w/anodized aluminium designation

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

This series is also available without a valve in a
Straight -Thru design and a Double Shut-Off design.

For Straight -Thru Couplers, please change the part number from 25KA to 25KF when ordering.

For Double Shut-Off Couplers, please change the part number from 25KA to 25KB when ordering.

MATERIALS

POM	Black Thermoplastic
PVDF	Polyvinyl fluoride
Chem+	PVDF/PEEK springs

WARNING

This product can expose you to chemicals including Tetrafluoroethylene, which is known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

SERIES 21 KB POM, PVDF and RectuKey - 1/4" Body - Automatic Single Shut-Off - NOMINAL PLUG BORE .20"

A new type of locking system made of plastic with a non-slip sleeve considerably expands the application possibilities of the Series 21 coupler.

Working Temperature depending on medium

-4°F up to +176°F (POM)

-4°F up to +250°F (PVDF)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure

POM

150 psi, maximum static working pressure with 4:1 design factor. (70°F)

PVDF

120 psi, maximum static working pressure with 4:1 design factor. (70°F)

Note

BSP male & female threads are available upon request.

SERIES 48 KB POM, PVDF & CHEM+ - 1/4" Body - Automatic Double Shut-Off - NOMINAL PLUG BORE .28"

The 48 Series coupling system is available in POM, PVDF and a completely thermoplastic version with springs made of PEEK™ called RectuChem+. RectuChem+ products are referred to as CHEM+ in the tables. The coupler is fitted with a double shut-off valve, enabling it to be connected to a single shut-off (non-valved) plug as well as a double shut-off (plug with valve).

Working Temperature depending on medium

-4°F up to +176°F (POM)

-4°F up to +250°F (PVDF)

At a temperature below -4°F and above +300°F special seals are available.

Working Pressure
POM

0-145 psi, maximum static working pressure with 4:1 design factor. (70°F)

PVDF (springs of AISI 316 Ti)

0-116 psi, maximum static working pressure with 4:1 design factor. (70°F)

CHEM+ (springs of PEEK® 450G)

14.5-116 psi, maximum static working pressure with 4:1 design factor. (70°F)

Note

BSP male & female threads are available upon request.

This coupling is also available as a Straight -Thru coupling (valved plug).

Nycoil Blow Guns

The Nycoil Blow Gun offering is the most complete in the industry. In addition to a wide variety of tips that are designed for a multitude of special functions, we have a selection of Blow Gun body styles to meet the preferences of any user.

The Vari-Flo Blow Gun From Nycoil... Distinctive Design, Unmatched Performance!

Ergonomically designed, streamlined body fits comfortably in user's hand to minimize fatigue

Nickel plated brass tip enhances the Blow Gun's appearance as well as provides additional corrosion resistance

Hanging hook also provides finger protection from chip blow back

Unique plastic side plates give the Blow Gun a distinctive and contemporary look while adding to the comfort

Curve of the heavy-duty nickel-plated steel lever with soft Vinyl grip allows the thumb to nestle snugly in a natural and stress free position

Easy to operate Vari-Flo valve permits easy and accurate flow control

Rugged die cast zinc body available with chrome plated or black powder coat finish

**Vari-Flo

Blow Gun - G1 Series, Vari-Flo Body

This Vari-Flo Body (G1 Series) lever operated Blow Gun is uniquely designed to combine a contemporary appearance with unmatched performance. It features a zinc die cast body, nickel plated steel lever with a vinyl thumb grip, plastic side plates, stainless steel spring, repairable (replaceable) brass valve and Buna-N seals. Not only does this Blow Gun fit comfortably in the user's hand, it allows the amount of air flow to be controlled by how far the lever is depressed. Also can be used for water applications – especially good for controlling flow rate.

The recessed internal hex screw allows easy access to valve assembly for repairs or replacement. Available with a chrome plated or black powder coat finish. This Blow Gun is available in two configurations: with 1/8" female NPT outlet port to accommodate various tips or with a nickel plated brass tamper proof fixed safety tip that is permanently attached to the Blow Gun body.

WARNING: Removing the Safety Tip from a Blow Gun defeats the Safety Features and creates a Non-Safety Gun.

Blow Gun - G3 Series, Classic Body

This Classic Body, G3 Series lever operated Blow Gun is the original Nycoil Blow Gun developed in 1980 that has become widely accepted throughout the industry. It features a zinc die cast body, nickel plated steel lever with a vinyl thumb grip, stainless steel spring, brass valve and Buna-N seals. Its compact design makes it easy to handle and store while doing the work of larger models. The “flow stabilizer valve” provides low, stable airflow when the lever is lightly depressed or a powerful, steady air blast when the lever is fully depressed. Available with a chrome plated or black powder coat finish.

- This Blow Gun is available in two configurations:
- with tamperproof vent holes (“Perma Tip” - this is a safety Blow Gun)

Blow Gun - G6 Series, Pistol Grip

G6 Series - This lightweight pistol grip Blow Gun has a comfortable variable output trigger that allows infinite flow control. It features a Hostaform C body, trigger and valve, stainless steel springs and Buna-N seals. This Blow Gun is available in three configurations:

- with a permanently attached slender 4-1/4" bent spark proof aluminum nozzle that allows air blow off in hard to reach places and blind holes as small as .200". This is a safety Blow Gun and the body color is Blue. Part Number: [AK13-NPT](#)
- with a permanently attached slender 4-1/4" bent nickel plated brass nozzle and a "star-tip" to prevent dead-ending. This is a safety Blow Gun and the body color is Blue. Part Number: [AZ13-NPT](#)
- with a nickel plated brass 1/8" female NPT adapter to accommodate all other tips. The body color is Blue. Part Number: [AI13-NPT](#)

Blow Gun - TP Series, Pistol Grip

TP1204

TP1252

TP Series - This series is OSHA compliant with a whisper safety tip and is the most rugged, durable and comfortable Blow Gun to use. They feature a POM (black Delrin) body and trigger, a 4-1/4" nickel plated brass nozzle and tip, stainless steel springs and Buna-N seals. The specially designed valve allows accurate flow adjustment and control simply by pulling the trigger. This Blow Gun is available in three options:

- without a whisper tip Part Number: [TP1204](#)
- with a “whisper” tip that makes this an extremely quiet Blow Gun. Part Number: [TP1204A](#)
- with a Siphon tip for injection of low viscosity media. Includes an 8 foot vinyl suction hose that connects the Blow Gun nozzle with a quick release coupling. The Siphon tip can be adjusted to allow desired flow rate and can be easily removed with quick release coupling for conversion to a 4 1/4" Extension Blow Gun (non-safety). Part Number: [TP1252](#)

TP Series, Ordering Information

Description	Plastic Body P/N
Fixed 4 3/4" Nickel Plated Brass Curved Safety Extension with Whisper Tip	TP1204A (Standard Blow Gun)
13" Nickel Plated Steel Straight Safety Extension	TP12013A*
20" Nickel Plated Steel Straight Safety Extension	TP12020A*
40" Nickel Plated Steel Straight Safety Extension	TP12040A*
Fixed Non-Safety Siphon	TP1252

* To order without the whisper tip, drop “A” from part number.

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Blow Gun Accessories - "Safety" Tips

Nycoil Blow Gun "Safety" Tips conform to the following standards: OSHA Standard 1910.242 (B) permitting a maximum of 30 psi outlet pressure when dead ended with a maximum of 150 psi inlet pressure. OSHA Standard 1910.95 regulating occupational noise level exposure.

Nickel Plated Brass Safety Tip: General purpose tip for blowing away dust, chips, etc. Vari-Flo Blow Gun (as shown): [G1C-S](#) Tip Only: [GTS](#)

Nickel Plated Brass Booster Tip: Multiple holes create a venturi effect, which increases air flow and working capacity. Vari-Flo Blow Gun (as shown): [G1C-BS](#) Tip Only: [GTBS](#)

Air Screen Tip: Nickel plated brass tip provides a conical air stream around the center air stream to minimize dust and chip blowback. Vari-Flo Blow Gun (as shown): [G1C-AS](#) Tip Only: [GTAS](#)

Nickel Plated Steel Straight Extension Tips (3", 6", 8", 10", 12", 16", 18", 24", 30" & 36"): Good for getting into high or hard to reach places. Made from a brass base with a rugged steel extension tube, all nickel plated. Tip Only: [GT03S](#), [GT06S](#), [GT08S](#), [GT10S](#), [GT12S](#), [GT16S](#), [GT18S](#), [GT24S](#), [GT30S](#) & [GT36S](#)

Plastic Booster Tip: Unique super booster Nylon tip provides large air volume at low velocity. Will not mar or scratch delicate surfaces. Extremely quiet. Vari-Flo Blow Gun (as shown): [G1C-PBS](#)

Aluminum Straight Extension Tip (24"): Made from lightweight aluminum for easier use and to prevent sparking. Can easily be bent or cut to any length. Tip Only: [GT24AS](#)

WARNING: Removing the Safety Tip from a Blow Gun defeats the Safety Features and creates a Non-Safety Gun.

Aluminum Curved Extension Tips (3" & 6"): Provides high air flow and spark prevention as well as a little more reach into tight spaces that might be inaccessible with straight tips. Also, allows a more comfortable blow-off angle, especially when used with a pistol grip Blow Gun Tip Only: [GTC03AS](#) & [GTC06AS](#) (as shown)

WARNING

This product can expose you to chemicals including Lead, which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Blow Gun Accessories - "Non-Safety" Tips

"Non-Safety" Tips do not have a safety by-pass and must be used on air lines that have a regulated maximum pressure of 30 psi in order to comply with the OSHA Standards.

Spray Tip: delivers a fine mist – good for spraying plants, fruits and vegetables. Vari-Flo Blow Gun (as shown): [G1C-PR](#)
Tip Only: [GTPR](#)

Nickel Plated Brass Non-Safety Tip: basic tip for blow off applications where a narrow, concentrated stream of air is required. Vari-Flo Blow Gun (as shown): [G1C-B](#) Tip Only: [GTB](#)

Aluminum Straight Extension Tip (3"): good for reaching into crevices and tight spaces. Made from lightweight aluminum for easier use and prevents sparking. Tip Only: [GT03A](#)

Rubber Tip: soft rubber tip with plated brass base will not scratch or mar delicate surfaces. Vari-Flo Blow Gun (as shown): [G1C-R](#) Tip Only: [GTR](#)

3" Flex Tip: designed to get into tight areas without marring delicate surfaces, especially where some bending is required. Vari-Flo Blow Gun (as shown): [G1C-Y03](#)
Tip Only: [GTY03](#)

PE	Linear Low Density Polyethylene
U	Polyurethane

RATINGS CODE		
G	—	Good to excellent. Little or no swelling, tensile or surface changes. Preferred choice.
L	—	Marginal or conditional. Noticeable effects but not necessarily indicating lack of serviceability. Further testing suggested for specific application. Very long-term effects such as stiffening or potential for crazing should be evaluated.
P	—	Poor or unsatisfactory. Not recommended without extensive and realistic testing.
—	—	Indicates that this was not tested.
#	—	For fluoropolymer. Indicates good chemical resistance but potential for excessive permeation.

Notes:

The Fluid Compatibility Guides are simplified rating tabulations based on immersion tests at 75°F. Higher temperatures tend to reduce ratings. Since final selection depends on pressure, fluid and ambient temperature and other factors not known to Parker Hannifin Co., no performance guarantee is expressed or implied. Ratings do not imply compliance with specialized codes such as FDA, NSF, AGA or UL and do not cover possible fluid discoloration, taste or odor effects. For conveying foodstuffs use FDA sanctioned materials, and for potable water use NSF listed materials. For chemicals not listed, or for advice on particular applications, please consult Product Engineering at Nycoil. Hose applications for these fluids must take into account legal and insurance regulations. This does not imply AGA or UL compliance.

Chemical compatibility does not imply low permeation rates. Consult the Nycoil for a suggestion for your specific requirement.

Does not imply NSF or FDA compliance.

Chemical compatibility does not imply acceptability for use in airless paint spray applications. These applications require a special conductive hose.

Fluoropolymers are chemically compatible with Anhydrous Ammonia. However, extreme caution must be used in dealing with Anhydrous Ammonia since it can cause severe injuries such as blindness and/or chemical burns.

Tubing Compatibility Chart

Fitting Line	Polyethylene	Nylon	Polyurethane
Compression	X ⁺	X ⁺	X ⁺
Prestolok	X	X	X
Flow Controls	X	X	X
Prestomatic	X	X	-

⁺Tube support recommended.
Ratings are based on static pressure conditions. Plastic and brass tube support recommended.

Tube Line Fabrication Guide for Leak Free Systems

Every hydraulic, pneumatic and lubrication system requires some form of tube line fabrication and fitting installation for completion. Proper fabrication and installation are essential for the overall efficiency, leak free performance, and general appearance of any system.
Start by planning ahead. After sizing the tube lines and selecting the appropriate style of fitting, consider the following in the design of your system:

1. Accessibility of joints
2. Proper routing of lines
3. Adequate tube line supports
4. Available fabricating tools

ROUTING OF LINES

Routing of lines is probably the most difficult yet most significant of these system design considerations. Proper routing involves getting a connecting line from one point to another through the most logical path.
Always try to leave fitting joints as accessible as possible. Hard to reach joints are hard to assemble and tighten properly. Inaccessible joints are also more difficult and time consuming to service.

The most logical path should have the following characteristics:

- Avoid excessive strain on joint — A strained joint will eventually leak.

Nycoil Safety Guide

For selecting and using Hose, Tubing, Fittings, and Related Accessories

Safety Guide for Selecting and Using Hose, Tubing, Fittings and Related Accessories

Publication No. 4400-B.1

Revised: September 2015

WARNING: Failure or improper selection or improper use of hose, tubing, fittings, assemblies, valves, connectors, conductors or related accessories ("Products") can cause death, personal injury and property damage. Possible consequences of failure or improper selection or improper use of these Products include, but are not limited to:

- Fittings thrown off at high speed.
- High velocity fluid discharge.
- Explosion or burning of the conveyed fluid.
- Electrocuting from high voltage electric powerlines.
- Contact with suddenly moving or falling objects that are controlled by the conveyed fluid.
- Injections by high-pressure fluid discharge.
- Dangerously whipping Hose.

- Tube or pipe burst.
- Weld joint fracture.
- Contact with conveyed fluids that may be hot, cold, toxic or otherwise injurious.
- Sparking or explosion caused by static electricity buildup or other sources of electricity.
- Sparking or explosion while spraying paint or flammable liquids.
- Injuries resulting from inhalation, ingestion or exposure to fluids.

Before selecting or using any of these Products, it is important that you read and follow the instructions below. No product from any division in Fluid Connector Group is approved for in-flight aerospace applications. For hoses and fittings used in in-flight aerospace applications, please contact Parker Aerospace Group.

1.0 GENERAL INSTRUCTIONS

1.0 Scope: This safety guide provides instructions for selecting and using (including assembling, installing, and maintaining) these Products. For convenience, all rubber and/or thermoplastic products commonly called "hose" or "tubing" are called "Hose" in this safety guide. Metallic tube or pipe are called "tube". All assemblies made with Hose are called "Hose Assemblies". All assemblies made with Tube are called "Tube Assemblies". All products commonly called "fittings", "couplings" or "adapters" are called "Fittings". Valves are fluid system components that control the passage of fluid. Related accessories are ancillary devices that enhance or monitor performance including crimping, flaring, flanging, presetting, bending, cutting, deburring, swaging machines, sensors, tags, lockout handles, spring guards and associated tooling. This safety guide is a supplement to and is to be used with the specific Parker publications for the specific Hose, Fittings and Related Accessories that are being considered for use. Parker publications are available at www.parker.com. SAE J1273 (www.sae.org) and ISO 17165-2 (www.ansi.org) also provide recommended practices for hydraulic Hose Assemblies, and should be followed.

1.1 Fail-Safe: Hose, Hose Assemblies, Tube, Tube Assemblies and Fittings can and do fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of the Hose, Hose Assembly, Tube, Tube Assembly or Fitting will not endanger persons or property.

1.2 Distribution: Provide a copy of this safety guide to each person responsible for selecting or using Hose, Tube and Fitting products. Do not select or use Parker Hose, Tube or Fittings without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the Products.

1.3 User Responsibility: Due to the wide variety of operating conditions and applications for Hose, Tube and Fittings. Parker does not represent or warrant that any particular Hose, Tube or Fitting is suitable for any specific end use system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the Products.
- Assuring that the user's requirements are met and that the application presents no health or safety hazards.
- Following the safety guide for Related Accessories and being trained to operate Related Accessories.
- Providing all appropriate health and safety warnings on the equipment on which the Products are used.
- Assuring compliance with all applicable government and industry standards.

1.4 Additional Questions: Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the Products being considered or used, or call 1-800-CPARKER, or go to www.parker.com, for telephone numbers of the appropriate technical service department.

2.0 HOSE, TUBE & FITTINGS SELECTION INSTRUCTIONS

2.1 Electrical Conductivity: Certain applications require that the Hose be nonconductive to prevent electrical current flow. Other applications require the Hose and the Fittings and the Hose/Fitting interface to be sufficiently conductive to drain off static electricity. Extreme care must be exercised when selecting Hose, Tube and Fittings for these or any other applications in which electrical conductivity or nonconductivity is a factor. The electrical conductivity or nonconductivity of Hose, Tube and Fittings is dependent upon many factors and may be susceptible to change. These factors include but are not limited to the various materials used to make the Hose and the Fittings, Fitting finish (some Fitting finishes are electrically conductive while others are nonconductive), manufacturing methods (including moisture control), how the Fittings contact the Hose, age and amount of deterioration or damage or other changes, moisture content of the Hose at any particular time, and other factors. The following are considerations for electrically nonconductive and conductive Hose. For other applications consult the individual catalog pages and the appropriate industry or regulatory standards for proper selection.

2.1.1 Electrically Nonconductive Hose: Certain applications require that the Hose be nonconductive to prevent electrical current flow or to maintain electrical isolation. For applications that require Hose to be electrically nonconductive, including but not limited to applications near high voltage electric lines, only special nonconductive Hose can be used. The manufacturer of the equipment in which the nonconductive Hose is to be used must be consulted to be certain that the Hose, Tube and Fittings that are selected are proper for the application. Do not use any Parker Hose or Fittings for any such application requiring nonconductive Hose, including but not limited to applications near high voltage electric lines or dense magnetic fields, unless (i) the application is expressly approved in the Parker technical publication for the product, (ii) the Hose is marked "nonconductive", and (iii) the manufacturer of the equipment on which the Hose is to be used specifically approves the particular Parker Hose, Tube and Fittings for such use.

2.1.2 Electrically Conductive Hose: Parker manufactures special Hose for certain applications that require electrically conductive Hose. Parker manufactures special Hose for conveying paint in airless paint spraying applications. This Hose is labeled "Electrically Conductive Airless Paint Spray Hose" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate dangerous static charge buildup, which occurs in all airless paint spraying applications. Do not use any other Hose for airless paint spraying, even if electrically conductive. Use of any other Hose or failure to properly connect the Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. All hoses that convey fuels must be grounded.

Parker manufactures a special Hose for certain compressed natural gas ("CNG") applications where static electricity buildup may occur. Parker CNG Hose assemblies comply with the requirements of ANSI/AS NGV 4.2: CSA 12.52, "Hoses for Natural Gas Vehicles and Dispensing Systems" (www.ansi.org). This Hose is labeled "Electrically Conductive for CNG Use" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate

dangerous static charge buildup, which occurs in, for example, high velocity CNG dispensing or transfer. Do not use any other Hose for CNG applications where static charge buildup may occur, even if electrically conductive. Use of other Hoses in CNG applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. Care must also be taken to protect against CNG permeation through the Hose wall. See section 2.6, Permeation, for more information. Parker CNG Hose is intended for dispenser and vehicle use within the specified temperature range. Parker CNG Hose should not be used in confined spaces or unventilated areas or areas exceeding the specified temperature range. Final assemblies must be tested for leaks. CNG Hose Assemblies should be tested on a monthly basis for conductivity per ANSI/IAS NGV 4.2; CSA 12.52.

Parker manufactures special Hose for aerospace in-flight applications. Aerospace in-flight applications employing Hose to transmit fuel, lubricating fluids and hydraulic fluids require a special Hose with a conductive inner tube. This Hose for in-flight applications is available only from Parker's Stratoflex Products Division. Do not use any other Parker Hose for in-flight applications, even if electrically conductive. Use of other Hoses for in-flight applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury and property damage. These Hose assemblies for in-flight applications must meet all applicable aerospace industry, aircraft engine and aircraft requirements.

2.2 Pressure: Hose, Tube and Fitting selection must be made so that the published maximum working pressure of the Hose, Tube and Fittings are equal to or greater than the maximum system pressure. The maximum working pressure of a Hose, or Tube Assembly is the lower of the respective published maximum working pressures of the Hose, Tube and the Fittings used. Surge pressures or peak transient pressures in the system must be below the published maximum working pressure for the Hose, Tube and Fitting. Surge pressures and peak pressures can usually only be determined by sensitive electrical instrumentation that measures and indicates pressures at millisecond intervals. Mechanical pressure gauges indicate only average pressures and cannot be used to determine surge pressures or peak transient pressures. Published burst pressure ratings for Hose is for manufacturing test purposes only and is no indication that the Product can be used in applications at the burst pressure or otherwise above the published maximum recommended working pressure.

2.3 Suction: Hoses used for suction applications must be selected to insure that the Hose will withstand the vacuum and pressure of the system. Improperly selected Hose may collapse in suction application.

2.4 Temperature: Be certain that fluid and ambient temperatures, both steady and transient, do not exceed the limitations of the Hose, Tube, Fitting and Seals. Temperatures below and above the recommended limit can degrade Hose, Tube, Fittings and Seals to a point where a failure may occur and release fluid. Tube and Fittings performances are normally degraded at elevated temperature. Material compatibility can also change at temperatures outside of the rated range. Properly insulate and protect the Hose Assembly when routing near hot objects (e.g. manifolds). Do not use any Hose in any application where failure of the Hose could result in the conveyed fluids (or vapors or mist from the conveyed fluids) contacting any open flame, molten metal, or other potential fire ignition source that could cause burning or explosion of the conveyed fluids or vapors.

2.5 Fluid Compatibility: Hose, and Tube Assembly selection must assure compatibility of the Hose tube, cover, reinforcement, Tube, Plating and Seals with the fluid media used. See the fluid compatibility chart in the Parker publication for the product being considered or used. This information is offered only as a guide. Actual service life can only be determined by the end user by testing under all extreme conditions and other analysis. Hose, and Tube that is chemically compatible with a particular fluid must be assembled using Fittings and adapters containing likewise compatible seals. Flange or flare processes can change Tube material properties that may not be compatible with certain requirements such as NACE.

2.6 Permeation: Permeation (that is, seepage through the Hose or Seal) will occur from inside the Hose or Fitting to outside when Hose or Fitting is used with gases, liquid and gas fuels, and refrigerants (including but not limited to such materials as helium, diesel fuel, gasoline, natural gas, or LPG). This permeation may result in high concentrations of vapors which are potentially flammable, explosive, or toxic, and in loss of fluid. Dangerous explosions, fires, and other hazards can result when using the wrong Hose for such applications. The system designer must take into account the fact that this permeation will take place and must not use Hose or Fitting if this permeation could be hazardous. The system designer must take into account all legal, government, insurance, or any other special regulations which govern the use of fuels and refrigerants. Never use a

Hose or Fitting even though the fluid compatibility is acceptable without considering the potential hazardous effects that can result from permeation through the Hose or Tube Assembly. Permeation of moisture from outside the Hose or Fitting to inside the Hose or Fitting will also occur in Hose or Tube assemblies, regardless of internal pressure. If this moisture permeation would have detrimental effects (particularly, but not limited to refrigeration and air conditioning systems), incorporation of sufficient drying capacity in the system or other appropriate system safeguards should be selected and used. The sudden pressure release of highly pressurized gas could also result in Explosive Decompression failure of permeated Seals and Hoses.

2.7 Size: Transmission of power by means of pressurized fluid varies with pressure and rate of flow. The size of the components must be adequate to keep pressure losses to a minimum and avoid damage due to heat generation or excessive fluid velocity.

2.8 Routing: Attention must be given to optimum routing to minimize inherent problems (kinking or flow restriction due to Hose collapse, twisting of the Hose, proximity to hot objects or heat sources). For additional routing recommendations see SAE J1273 and ISO 17165-2. Hose Assemblies have a finite life and should be installed in a manner that allows for ease of inspection and future replacement. Hose because of its relative short life, should not be used in residential and commercial buildings inside of inaccessible walls or floors, unless specifically allowed in the product literature. Always review all product literature for proper installation and routing instructions.

2.9 Environment: Care must be taken to insure that the Hose, Tube and Fittings are either compatible with or protected from the environment (that is, surrounding conditions) to which they are exposed. Environmental conditions including but not limited to ultraviolet radiation, sunlight, heat, ozone, moisture, water, salt water, chemicals and air pollutants can cause degradation and premature failure.

2.10 Mechanical Loads: External forces can significantly reduce Hose, Tube and Fitting life or cause failure. Mechanical loads which must be considered include excessive flexing, twist, kinking, tensile or side loads, bend radius, and vibration. Use of swivel type Fittings or adapters may be required to insure no twist is put into the Hose. Use of proper Hose or Tube clamps may also be required to reduce external mechanical loads. Unusual applications may require special testing prior to Hose selection.

2.11 Physical Damage: Care must be taken to protect Hose from wear, snagging, kinking, bending smaller than minimum bend radius and cutting, any of which can cause premature Hose failure. Any Hose that has been kinked or bent to a radius smaller than the minimum bend radius, and any Hose that has been cut or is cracked or is otherwise damaged should be removed and discarded. Fittings with damages such as scratches on sealing surfaces and deformation should be replaced.

2.12 Proper End Fitting: See instructions 3.2 through 3.5. These recommendations may be substantiated by testing to industry standards such as SAE J517 for hydraulic applications, or MIL-A-5070, AS1339, or AS3517 for Hoses from Parker's Stratoflex Products Division for aerospace applications.

2.13 Length: When determining the proper Hose or Tube length of an assembly take into consideration. The Hose length change due to pressure. The Tube length change due to thermal expansion or contraction, and the Hose or Tube machine tolerances and movements. When routing short hose assemblies, it is recommended that the minimum free hose length is always used. Consult the hose manufacturer for their minimum free hose length recommendations. Hose assemblies should be installed in such a way that any motion or flexing occurs within the same plane.

2.14 Specifications and Standards: When selecting Hose, Tube and Fittings, government, industry, and Parker specifications and recommendations must be reviewed and followed as applicable.

2.15 Hose Cleanliness: Hose and Tube components may vary in cleanliness levels. Care must be taken to ensure that the Hose and Tube Assembly selected has an adequate level of cleanliness for the application.

2.16 Fire Resistant Fluids: Some fire resistant fluids that are to be conveyed by Hose or Tube require use of the same type of Hose or Tube as used with petroleum base fluids. Some such fluids require a special Hose, Tube, Fitting and Seal, while a few fluids will not work with any Hose at all. See instructions 2.5 and 1.5. The wrong Hose, Tube, Fitting or Seal may fail after a very short service. In addition, all liquids but pure water may burn fiercely under certain conditions, and even pure water leakage may be hazardous.

2.17 Radiant Heat: Hose and Seals can be heated to destruction without contact by such nearby items as hot manifolds or molten metal. The same heat source may then initiate a fire. This can occur despite the presence of cool air around the Hose or Seal. Performance of Tube and Fitting subjected to the heat could be degraded.

2.18 Welding or Brazing: When using a torch or arc welder in close

proximity to hydraulic lines, the hydraulic lines should be removed or shielded with appropriate fire resistant materials. Flame or weld spatter could burn through the Hose or Seal and possibly ignite escaping fluid resulting in a catastrophic failure. Heating of plated parts, including Hose Fittings and adapters, above 450°F (232°C) such as during welding, brazing or soldering may emit deadly gases. Any elastomer seal on fittings shall be removed prior to welding or brazing, any metallic surfaces shall be protected after brazing or welding when necessary. Welding and brazing filler material shall be compatible with the Tube and Fitting that are joined.

2.19 Atomic Radiation: Atomic radiation affects all materials used in Hose and Tube assemblies. Since the long-term effects may be unknown, do not expose Hose or Tube assemblies to atomic radiation. Nuclear applications may require special Tube and Fittings.

2.20 Aerospace Applications: The only Hose, Tube and Fittings that may be used for in-flight aerospace applications are those available from Parker's Stratoflex Products Division. Do not use any other Hose or Fittings for in-flight applications. Do not use any Hose or Fittings from Parker's Stratoflex Products division with any other Hose or Fittings, unless expressly approved in writing by the engineering manager or chief engineer of Stratoflex Products Division with any other Hose or Fittings, unless expressly approved in writing by the engineering manager or chief engineer of Stratoflex Products Division and verified by the user's own testing and inspection to aerospace industry standards.

2.21 Unlocking Couplings: Ball locking couplings or other Fittings with quick disconnect ability can unintentionally disconnect if they are dragged over obstructions, or if the sleeve or other disconnect member, is bumped or moved enough to cause disconnect. Threaded Fittings should be considered where there is a potential for accidental uncoupling.

3.0 HOSE AND FITTINGS ASSEMBLY AND INSTALLATION INSTRUCTIONS

3.1 Component Inspection: Prior to assembly, a careful examination of the Hose and Fittings must be performed. All components must be checked for correct style, size, catalog number, and length. The Hose must be examined for cleanliness, obstructions, blisters, cover looseness, kinks, cracks, cuts or any other visible defects. Inspect the Fitting and sealing surfaces for burrs, nicks, corrosion or other imperfections. Do NOT use any component that displays any signs of nonconformance.

3.2 Hose and Fitting Assembly: Do not assemble a Parker Fitting on a Parker Hose that is not specifically listed by Parker for that Fitting, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. Do not assemble a Parker Fitting on another manufacturer's Hose or a Parker Hose on another manufacturer's Fitting unless (i) the engineering manager or chief engineer of the appropriate Parker division approves the Assembly in writing or that combination is expressly approved in the appropriate Parker literature for the specific Parker product, and (ii) the user verifies the Assembly and the application through analysis and testing. For Parker Hose that does not specify a Parker Fitting, the user is solely responsible for the selection of the proper Fitting and Hose Assembly procedures. See instruction 1.4.

To prevent the possibility of problems such as leakage at the Fitting or system contamination, it is important to completely remove all debris from the cutting operation before installation of the Fittings. The Parker published instructions must be followed for assembling the Fittings on the Hose. These instructions are provided in the Parker Fitting catalog for the specific Parker Fitting being used, or by calling 1-800-CPARKER, or at www.parker.com.

3.3 Related Accessories: Do not crimp or swage any Parker Hose or Fitting with anything but the listed swage or crimp machine and dies in accordance with Parker published instructions. Do not crimp or swage another manufacturer's Fitting with a Parker crimp or swage die unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.

3.4 Parts: Do not use any Parker Fitting part (including but not limited to socket, shell, nipple, or insert) except with the correct Parker mating parts, in accordance with Parker published instructions, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.

3.5 Field Attachable/Permanent: Do not reuse any field attachable Hose Fitting that has blown or pulled off a Hose. Do not reuse a Parker permanent Hose Fitting (crimped or swaged) or any part thereof. Complete Hose Assemblies may only be reused after proper inspection under section 4.0. Do not assemble Fittings to any previously used hydraulic Hose that was in service, for use in a fluid power application.

3.6 Pre-Installation Inspection: Prior to installation, a careful ex-

amination of the Hose Assembly must be performed. Inspect the Hose Assembly for any damage or defects. DO NOT use any Hose Assembly that displays any signs of nonconformance.

3.7 Minimum Bend Radius: Installation of a Hose at less than the minimum listed bend radius may significantly reduce the Hose life. Particular attention must be given to preclude sharp bending at the Hose to Fitting juncture. Any bending during installation at less than the minimum bend radius must be avoided. If any Hose is kinked during installation, the Hose must be discarded.

3.8 Twist Angle and Orientation: Hose Assembly installation must be such that relative motion of machine components does not produce twisting.

3.9 Securement: In many applications, it may be necessary to restrain, protect, or guide the Hose to protect it from damage by unnecessary flexing, pressure surges, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.

3.10 Proper Connection of Ports: Proper physical installation of the Hose Assembly requires a correctly installed port connection insuring that no twist or torque is transferred to the Hose when the Fittings are being tightened or otherwise during use.

3.11 External Damage: Proper installation is not complete without insuring that tensile loads, side loads, kinking, flattening, potential abrasion, thread damage or damage to sealing surfaces are corrected or eliminated. See instruction 2.10.

3.12 System Checkout: All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Hose maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potential hazardous areas while testing and using.

3.13 Routing: The Hose Assembly should be routed in such a manner so if a failure does occur, the escaping media will not cause personal injury or property damage. In addition, if fluid media comes in contact with hot surfaces, open flame or sparks, a fire or explosion may occur. See section 2.4.

3.14 Ground Fault Equipment Protection Devices (GFEEDs): **WARNING!** Fire and Shock Hazard. To minimize the danger of fire if the heating cable of a Multitube bundle is damaged or improperly installed, use a Ground Fault Equipment Protection Device. Electrical fault currents may be insufficient to trip a conventional circuit breaker. For ground fault protection, the IEEE 515: (www.ansi.org) standard for heating cables recommends the use of GFEEDs with a nominal 30 milliampere trip level for "piping systems in classified areas, those areas requiring a high degree of maintenance, or which may be exposed to physical abuse or corrosive atmospheres".

4.0 TUBE AND FITTINGS ASSEMBLY AND INSTALLATION INSTRUCTIONS

4.1 Component Inspection: Prior to assembly, a careful examination of the Tube and Fittings must be performed. All components must be checked for correct style, size, material, seal, and length. Inspect the Fitting and sealing surfaces for burrs, nicks, corrosion, missing seal or other imperfections. Do NOT use any component that displays any signs of nonconformance.

4.2 Tube and Fitting Assembly: Do not assemble a Parker Fitting with a Tube that is not specifically listed by Parker for that Fitting, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. The Tube must meet the requirements specified to the Fitting.

The Parker published instructions must be followed for assembling the Fittings to a Tube. These instructions are provided in the Parker Fitting catalog for the specific Parker Fitting being used, or by calling 1-800-CPARKER, or at www.parker.com.

4.3 Related Accessories: Do not preset or flange Parker Fitting components using another manufacturer's equipment or procedures unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. Tube, Fitting component and tooling must be checked for correct style, size and material. Operation and maintenance of Related Accessories must be in accordance with the operation manual for the designated Accessory.

4.4 Securement: In many applications, it may be necessary to restrain, protect, or guide the Tube to protect it from damage by unnecessary flexing, pressure surges, vibration, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.

4.5 Proper Connection of Ports: Proper physical installation of the Tube Assembly requires a correctly installed port connection insuring that no torque is transferred to the Tube when the Fittings are being tightened or otherwise during use.

4.6 External Damage: Proper installation is not complete without insuring that tensile loads, side loads, flattening, potential abrasion,

thread damage or damage to sealing surfaces are corrected or eliminated. See instruction 2.10.

4.7 System Checkout: All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Tube Assembly maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potential hazardous areas while testing and using.

4.8 Routing: The Tube Assembly should be routed in such a manner so if a failure does occur, the escaping media will not cause personal injury or property damage. In addition, if fluid media comes in contact with hot surfaces, open flame or sparks, a fire or explosion may occur. See section 2.4.

5.0 HOSE AND FITTING MAINTENANCE AND REPLACEMENT INSTRUCTIONS

5.1 Even with proper selection and installation, Hose life may be significantly reduced without a continuing maintenance program. The severity of the application, risk potential from a possible Hose failure, and experience with any Hose failures in the application or in similar applications should determine the frequency of the inspection and the replacement for the Products so that Products are replaced before any failure occurs. Certain products require maintenance and inspection per industry requirements. Failure to adhere to these requirements may lead to premature failure. A maintenance program must be established and followed by the user and, at minimum, must include instructions 5.2 through 5.7

5.2 Visual Inspection Hose/Fitting: Any of the following conditions require immediate shut down and replacement of the Hose Assembly:

- Fitting slippage on Hose;
- Damaged, cracked, cut or abraded cover (any reinforcement exposed);
- Hard, stiff, heat cracked, or charred Hose;
- Cracked, damaged, or badly corroded Fittings;
- Leaks at Fitting or in Hose;
- Kinked, crushed, flattened or twisted Hose; and
- Blistered, soft, degraded, or loose cover.

5.3 Visual Inspection All Other: The following items must be tightened, repaired, corrected or replaced as required:

- Leaking port conditions;
- Excess dirt buildup;
- Worn clamps, guards or shields; and
- System fluid level, fluid type, and any air entrapment.

5.4 Functional Test: Operate the system at maximum operating pressure and check for possible malfunctions and leaks. Personnel must avoid potential hazardous areas while testing and using the system. See section 2.2.

5.5 Replacement Intervals: Hose assemblies and elastomeric seals used on Hose Fittings and adapters will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Hose Assemblies and elastomeric seals should be inspected and replaced at specific replacement intervals, based on previous service life, government or industry recommendations, or when failures could result in unacceptable downtime, damage, or injury risk. See section 1.2. Hose and Fittings may be subjected to internal mechanical and/or chemical wear from the conveying fluid and may fail without warning. The user must determine the product life under such circumstances by testing. Also see section 2.5.

5.6 Hose Inspection and Failure: Hydraulic power is accomplished by utilizing high pressure fluids to transfer energy and do work. Hoses, Fittings and Hose Assemblies all contribute to this by transmitting fluids at high pressures. Fluids under pressure can be dangerous and potentially lethal and, therefore, extreme caution must be exercised when working with fluids under pressure and handling the Hoses transporting the fluids. From time to time, Hose Assemblies will fail if they are not replaced at proper time intervals. Usually these failures are the result of some form of misapplication, abuse, wear or failure to perform proper maintenance. When Hoses fail, generally the high pressure fluids inside escape in a stream which may or may not be visible to the user. Under no circumstances should the user attempt to locate the leak by "feeling" with their hands or any other part of their body. High pressure fluids can and will penetrate the skin and cause severe tissue damage and possibly loss of limb. Even seemingly minor hydraulic fluid injection injuries must be treated immediately by a physician with knowledge of the tissue damaging properties of hydraulic fluid.

If a Hose failure occurs, immediately shut down the equipment and leave the area until pressure has been completely released from the Hose Assembly. Simply shutting down the hydraulic pump may or may not eliminate the pressure in the Hose Assembly. Many times check valves, etc., are employed in a system and can cause pressure to

remain in a Hose Assembly even when pumps or equipment are not operating. Tiny holes in the Hose, commonly known as pinholes, can eject small, dangerously powerful but hard to see streams of hydraulic fluid. It may take several minutes or even hours for the pressure to be relieved so that the Hose Assembly may be examined safely. Once the pressure has been reduced to zero, the Hose Assembly may be taken off the equipment and examined. It must always be replaced if a failure has occurred. Never attempt to patch or repair a Hose Assembly that has failed. Consult the nearest Parker distributor or the appropriate Parker division for Hose Assembly replacement information. Never touch or examine a failed Hose Assembly unless it is obvious that the Hose no longer contains fluid under pressure. The high pressure fluid is extremely dangerous and can cause serious and potentially fatal injury.

5.7 Elastomeric seals: Elastomeric seals will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Elastomeric seals should be inspected and replaced.

5.8 Refrigerant gases: Special care should be taken when working with refrigeration systems. Sudden escape of refrigerant gases can cause blindness if the escaping gases contact the eye and can cause freezing or other severe injuries if it contacts any other portion of the body.

5.9 Compressed natural gas (CNG): Parker CNG Hose Assemblies should be tested after installation and before use, and at least on a monthly basis per instructions provided on the Hose Assembly tag. The recommended procedure is to pressurize the Hose and check for leaks and to visually inspect the Hose for damage and to perform an electrical resistance test. Caution: Matches, candles, open flame or other sources of ignition shall not be used for Hose inspection. Leak check solutions should be rinsed off after use.

6.0 HOSE STORAGE

6.1 Age Control: Hose and Hose Assemblies must be stored in a manner that facilitates age control and first-in and first-out usage based on manufacturing date of the Hose and Hose Assemblies. Unless otherwise specified by the manufacturer or defined by local laws and regulations:

6.1.1 The shelf life of rubber hose in bulk form or hose made from two or more materials is 28 quarters (7 years) from the date of manufacture, with an extension of 12 quarters (3 years), if stored in accordance with ISO 2230.

6.1.2 The shelf life of thermoplastic and polytetrafluoroethylene hose is considered to be unlimited;

6.1.3 Hose assemblies that pass visual inspection and proof test shall not be stored for longer than 2 years.

6.1.4 Storage: Stored Hose and Hose Assemblies must not be subjected to damage that could reduce their expected service life and must be placed in a cool, dark and dry area with the ends capped. Stored Hose and Hose Assemblies must not be exposed to temperature extremes, ozone, oils, corrosive liquids or fumes, solvents, high humidity, rodents, insects, ultraviolet light, electromagnetic fields or radioactive materials.

TERMS AND CONDITIONS OF SALE

Unless by separate written agreement signed by Nycoil, the terms and conditions specified below comprises the whole agreement between seller and buyer. No other terms or conditions shall be of any consequence. If buyer accepts any part of the offered merchandise then buyer agrees to all such terms and conditions as set forth in Nycoil condition of sale. If buyer finds any term or condition not acceptable, buyer must notify Nycoil at once. Any additional or different terms and or conditions contained in buyers purchase orders or response hereto shall be deemed objected to by seller and shall be of no effect.

WARRANTY

Nycoil warrants its product to be free of defects in material and workmanship however makes no other warranties of merchantability, fitness, or otherwise, and there are no warranties which extends beyond the description on this document. Liability for breach of this warranty in material and workmanship is limited to repair or replacement of defective parts if returned to Nycoil within one year after the date of purchase.

Nycoil shall not be liable for incidental or consequential damages. No allowance will be made for repairs made by the purchaser.

TERMS OF PAYMENT

Net 30 Days.

ORDERS

All orders are subject to acceptance by Nycoil at our Office in Randleman, NC. At Seller's option, terms of payment may be different from those set forth in this Condition of Sales.

MINIMUM CHARGES

Minimum billing on any order shall be \$50.00.

DELIVERIES

Delivery commitments are based upon the best information available at the time of quotation. Seller shall not be held liable for delays in shipping due to causes beyond our control or the control of our suppliers or subcontractors.

Please call our Customer Service Department to get this Price List on disk.

RETURN GOODS

No returns for credit will be allowed without Seller's prior written permission. Only unused active items in current product offerings will be considered for return or credit. Credit will be based upon prices in effect at time of return or time of invoicing, whichever lower, subject to restocking charge and any additional expense incurred in restoring goods to saleable condition, as determined by our inspection. All shipping charges shall be prepaid.

OTHER CANCELLATIONS

Cancelled orders are subject to a reasonable cancellation charge; however, orders for special products are not subject to cancellations.

DEFAULTS AND WAIVER

- If Buyer fails with respect to this or any other agreement with the Seller to pay any invoice when due or to accept any shipment as scheduled, Seller may, without prejudice to other remedies, defer further shipments until the default is corrected or terminate this agreement.
- No course of conduct, nor any delay of Seller in exercising any rights hereunder, shall waive any rights of Seller or modify this agreement

GOVERNING LAWS

This agreement shall be construed to be between merchants. The laws of the State of New Jersey shall govern any questions concerning its validity, construction or performance.

Nycoil is continually developing new innovations for our product line and, as a result, we reserve the right to make design, engineering, specification or pricing changes without prior notice.

Some items may require a minimum order quantity prior to production.
